

GENERAL GUIDANCE

Our LED planters come fully assembled except for the LED strip.

Included in the LED Lighting Kit:

- Solar-powered panel
- Ground mounting stake
- Remote control
- LED strip light
- USB charging cable

The USB charger can be used for the solar panel's rechargeable battery indoors during periods of bad weather or before first use

INSTALLATION INSTRUCTIONS

All of our planters are supplied with the same length LED strip. The strip is designed to be wrapped around the planter's crossbar and can simply be coiled around the bar during installation.

If the strip is longer than required, you can wrap it around the crossbar an extra one or two times. Alternatively, the strip can be cut to a shorter length if preferred.

Please only cut the LED strip at the marked cutting points (shown below). After cutting, ensure the exposed end is sealed using the supplied waterproof end cap or a suitable silicone sealant to maintain the strip's IP rating and weather resistance.
