Round, Grey White  
Galvanised Steel  
Gutters with 80mm  
Round Downpipes

### FINISH:

RAL 9002 -  
Grey White

## JOB SPECIFIC DETAILS & SCOPE OF WORKS

This considerable and characterful extension to the rear of a lovely detached Grade II cottage was enhanced by the choice of the Grey White Galvanised Steel rainwater system to match the window frames and fascia of extension.

Located in a picturesque setting on the edge of a village, the brick store outbuildings of the cottage, reputedly a former tanner's house, had been transformed with glass, wood panelling, skylights and solar panels into a modern, bright and light, eco friendly family home.

The home owner called to place the order for Galvanised Steel rainwater system parts in Grey White as the contractor had specified.

Rainclear were able to delivery the next day as they hold huge stocks of the Galvanised Steel in 6 popular shades including Galv, Black, Anthracite Grey, Dusty Grey, Sepia Brown and the Grey white chosen to match the window frames and fascia of the refurbished and extended outbuildings.

Galvanised Steel Fascia and Soffit are also available for next day delivery in 3 sizes and in Anthracite Grey, Dusty Grey and Grey White.

The Galvanised Steel Roofline systems from Rainclear offer a stylish and low maintenance choice as they do not require repainting and will not crack or fade. An annual clear-out and clean is recommended but this can be achieved these days without the need to climb a ladder.
