

The UK's leading specialists in metal rainwater, roofline, drainage and architectural ranges for new build, conservation, renovation and refurbishment.

CASE STUDY

Aluminium Coping

National Trust HQ - Heelis Aluminium Coping Refurb

PROJECT NAME:

National Trust HQ -
Heelis, Swindon
Aluminium Coping
Refurb

LOCATION:

Swindon Wiltshire

MATERIAL & PROFILE:

RAL 7016 Anthracite
Grey Aluminum
Coping 320mm width
and 160mm depth
+ various bespoke
corners, endcaps
valleys and gable
angles

FINISH:

RAL 7016
Anthracite Grey

The unique trapezoidal plan and 'saw-tooth' roofline of the building had 7 gables, 14 valley, 1 corner, 2 end-caps. 16 unique angles needed to be measured and bespoke fabricated.

"It was a great help for Rainclear to help survey this project at the start.

It made the sizing and ordering process much easier. The product was packaged and crated really well, everything arrived in perfect condition and in a timely manner. There were no issues with fitment of the components during the installation. Everything was painted and finished to a high standard.

We look forward to working with Rainclear and their products on future projects and would recommend them to anyone seeking complete confidence in service and quality of process from survey through to project completion."
