SIMPLE QUESTIONS WILL HELP YOU PICK THE PERFECT SYSTEM FOR YOUR HOME OR PROJECT

1. Is your property modern or heritage style property?

Modern: We recommend Galvanised (or ZM) Steel, Stainless Steel, Copper, Zinc or SnapIT Aluminium.

Traditional heritage style/ Grade 1 or 2 listed: We recommend Cast Aluminium or Cast Iron.

2. Do you live in an area prone to high rainfall?

Send us your architects drawings: Using the roof area, pitch and number of downpipes we can work out all the products you'll need and can give you a quote.

3. What colour do you want?

We stock a wide range of standard colours for next day delivery. A comprehensive range of other colours are available across all our metal ranges. Please send us your enquiry.

NEXT DAY DELIVERY!

ON ALL STOCKED PRODUCTS

Order by noon for next working day delivery

Benefits of Cast Iron

- Properly protected and installed cast iron can last in excess of 100 years!
- Our stocked cast iron rainwater systems, treated with a certified three-coat system, factory-applied under strictly controlled conditions, last up to 10 years before needing to be repainted.
- Cast Iron systems are easy to restore because of the way they are composed of these component parts. Damaged parts can be replaced and slotted into the existing system with a matching 'profile'.

CAST IRON

The cast iron rainwater system is available from stock in a primed finish for onsite painting or a pre-painted black (RAL9005) finish for NEXT DAY DELIVERY. In addition to the stock range the below colour options are available on a 15 working day lead-time, other colours are also available to order* please contact us on 0800 644 44 26.

* A surcharge may be applicable.

Colour Options

RAL 7016M	Anthracite Grey		RAL 3009M	Oxide Red	
RAL 8015M	Chestnut Brown		RAL 3020	Traffic Red	
RAL 9016	White		RAL 5010M	Flower Blue	
RAL 9005	Black		RAL 6005M	Moss Green	

Rainclear have put together a range of the most popular sizes and profiles to allow quick availability to its customers. In addition to its stock range, Rainclear can also offer other sizes to match individual project requirements.

HYDROSTRIP CAST IRON GUTTER SEALING SYSTEM

HALF ROUND AND HALF ROUND BEADED GUTTERS ONLY and sizes 100, 115 , 125mm and 150mm.

The Hydrostrip system comprises preformed rubber seals that are quick and easy to install, and totally reliable. Hydrostrip offers a faster and cleaner solution to gutter jointing than traditional mastic jointing sealants.

Hydrostrips (order code: GSP) have been a popular replacement to silicone for over half a decade.

Each pack contains 20no rubber strips , 20no M6 x 25 dome head screws and 20no M6 square nuts which are expected, when installed in accordance with the included instructions, to last as long as the system they seal (and longer than the traditional silicone alternative, the thickness and coverage of which can vary and that also needs to 'set' before it becomes watertight).

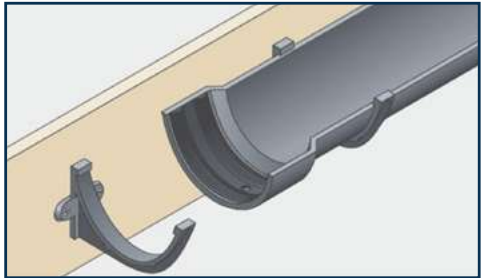

Fig 1. GSP: HYDROSTRIP GUTTER SEALING PACK
(N.B. Not suitable for moulded or ogee profiles)

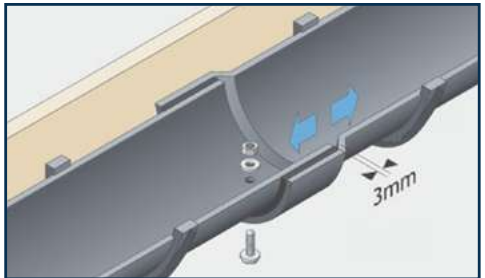

Fig 2. HYDROSTRIP SEALING INSTALL METHOD
Illustration of how the specially designed & tested EPDM rubber strips and screws & nuts go together to seal the gutters where they meet.

Benefits of Cast Aluminium

- Traditional cast gutters
- Corrosion resistant, lightweight and durable
- Factory applied Powder coated colour
- Low maintenance
- Easy to install

Rainclear have put together a range of the most popular sizes and profiles to allow quick availability to its customers.

In addition to its stock range, Rainclear can also offer other sizes to match individual project requirements.

CAST ALUMINIUM

Rainclear's cast aluminium rainwater system emulates the original features of traditional cast iron making it an ideal choice for sympathetic restoration and new build projects where traditional character is required.

Available from stock in a textured black powder coated finish and in any of the below standard RAL matt or textured colours a 7-10 working day lead-time..

Contact us on 0800 644 44 26 for Plain Mill Finish (unpainted) or to request a free colour swatch.

The Hydrostrips for Cast iron have been a popular replacement to silicone for over half a decade, and Metseal now offers the same solution for cast aluminium.

- The Metseal rubber seal has been specially developed for use with cast aluminium half round gutters
- Suitable for use with Half Round profile in 100, 115, 125 and 150mm
- The pack comes with 20 rubber seals plus associated nuts, bolts and washers.
- Supplied with 3 year's manufacturer's warranty (see pack for details)

Fig 1. Illustration of how the specially designed & tested EPDM rubber strips seal the gutter lengths where they join.

Fig 2. Powder Coated Anthracite Grey Cast Aluminium gutters along with some unusual angles (pictured) for which Rainclear arranged bespoke fabrication.

Downpipe Fixing Pack for Aluminium
Ordering Code: DPS40

For fixing the Cast Aluminium Eared downpipes use either our Screw20: a single No 12 sized, 2 inch screw & washer or our DPS40: Downpipe 'Fixing Pack' (Pack Contents: 20 x 40mm hex screws, washers, rawl plugs & caps) with either option you use 2no per eared socket.

For fixing the Aluminium Pipe Clip: use either Screw20 or DPS40 and 2no per clip.

ALUMINIUM & GLASS VERANDAS

Our new range of UK Manufactured Veranda and Garden Rooms are perfect for completing your contemporary or heritage outdoor spaces, available as standard with:

- 110 x 110mm aluminium frame with integral drainage in RAL 7016 Anthracite Grey and RAL9016 White. (other frame colours are available - complete the contact form and we'll be in touch to discuss your requirements)
- Choice of Laminated Glass roof panels or Polycarbonate in Opal, Clear or Bronze.

A Standard range of sizes are available online:

- From 3 x 3m to 6 x 3m. (other sizes are available - complete the contact form and we'll be in touch to discuss your requirements)
- The unique Rainclear design means there is no requirement for a centre post on the Verandas up to 5m wide.
- Typical lead time of 2 to 3 weeks and delivery direct from factory to your point of installation.

The Rainclear Systems range is designed to be easy to install by competent DIY enthusiasts, saving the additional cost of a contractor.

N.B. Self - install - ideal for new builds, self-build, as well as renovations and 'do-ups'!

SnapIT ALUMINIUM

Rainclear's SnapIT aluminium rainwater system joins together using concealed internal joints which give a smooth, clean appearance and is ideal for contemporary building design. The range consists of the three gutter profiles most commonly installed in the British Isles, half round, vintage moulded ogee and box profile. The gutter system is complimented by a swaged round pipe system in 63mm or 76mm diameter or swaged square pipes in 63 x 63mm or 76mm x or 76mm.

The SnapIT aluminium rainwater system is available from stock in a smooth matt black powder coated finish.

All standard RAL colours below are available on a 7-10 working day lead-time.

GUTTER FIXING

We advise that you ensure the fixing background (e.g fascia board) is securely fixed, level and able to support the weight of the gutter at full capacity and that the roof overhang is correct – see gutter position.

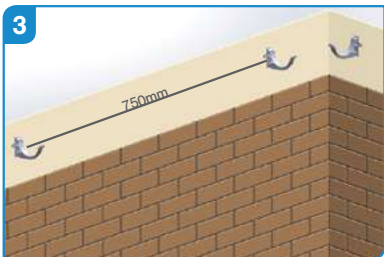

Buildings without fascias may need a different type of bracketry. We offer a range of brackets to suit most applications. We offer side and top fix rafter arms as well as rise and fall brackets. The latter do not meet current BS/EN load requirements so advice should be sort on the parameter of their use.

Start by deciding whether to fit the gutter level or with a fall to 1:600. Fit a bracket at each end of a run. Position brackets correctly for an angle or stopend.

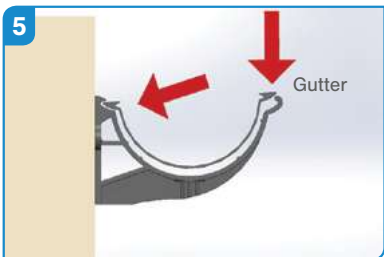

Image 2 shows the bracket positioning for the angle and bracket to take the gutter length.

We recommend fixing brackets every 750mm and using an additional bracket for each outlet or angle. Ideally using a string line or laser level between the two brackets, set out intermediate brackets at maximum centres of 750mm.

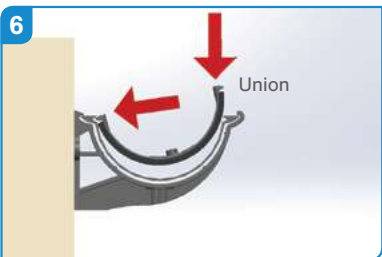

With the use of a plumb or laser line, position outlets over gullies and support with at least one bracket. Also include a bracket per angle (internal or external).

When fitting outlets and angles tuck the rear face of the gutter underneath the roof finish. Locate the gutter into the fascia bracket and then clip the front edge down into position.

After fitting outlets and angles, proceed with fitting the gutter lengths using the same method.

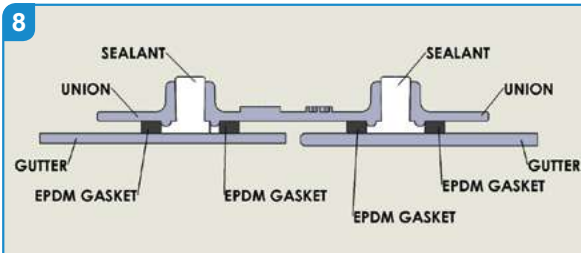

Ensure that all fixing surfaces are clean and dry. Placing the union into the groove in the rear face of the gutter and clip down into place on the front edge.

(For help with the 'knack' here watch our video: bit.ly/RC_videos)

Trim 4-5 mm off top of nozzle so it fits snugly into the large holes in the base of the union, inject the **special* SnapIT Express** low modulus sealant supplied into one of the large holes in the bottom of the union until the sealant appears at both of the smaller holes at the rim of the union. Repeat the action on the other large hole.

(*Sealant only available from us).

Ensure you apply the sealant gently to ensure the void is fully filled.

Clean off any excess sealant and then use the same process for every joint until the work is completed.

All lengths are supplied in a protective polythene wrapping with components similarly wrapped and stored in cardboard boxes. If painted product is to be stored outside, cover with tarpaulin to protect against rainfall and direct sunlight as if water gets trapped inside the protective covering and is exposed to warm sunlight then it may leave permanent watermarks on the paint finish. Mill finish items should be stored under cover to avoid uneven oxidization prior to being fitted.

Any use of sealant must not be carried out in wet weather or in temperatures below 5°C or above 50°C. All Joint surfaces must be perfectly clean and dry. Only a low modulus sealant must be used to prevent early failure. Ensure that the gutter joint sockets/spigots are correctly aligned with each other to ensure free thermal movement (3-4mm) within the gutter joint.

Any cut lengths should be de-burred and touched up with touch-up paint supplied prior to installation. For more information or further assistance, please contact us.

Box Gutter

If you are looking for a box gutter for a contemporary or commercial building design the Pressed Aluminium Box Gutter range offers a long life, low maintenance alternative to uPVC, while also accommodating thermal expansion at every joint and being 100% recyclable.

Joints are wet sealed and bolted in a simple but time proven method.

The gutter system is complimented by the swaged round downpipe, in 63mm or 76mm diameter (pg.56), or swaged square downpipe in 75x75mm, 75x100mm or 100x100mm.

Benefits of Pressed Aluminium Box Gutter

- Robust, non-corrodible & lightweight - ideal where maximum capacity gutters are required
- 3m long gutters - bracketry concealed after fixing, supported by top straps
- Low maintenance - no requirement to repaint during lifetime
- Life expectancy of 40years in rural/suburban and 25 in marine/industrial areas
- Aluminium is 100% recyclable
- **Matt Black** is available from stock for **Next Day Delivery** and the other standard RAL colours (pg.48) are available on a 10 working day lead-time.

ALUMINIUM WINDOW SURROUND PODS

This range of high quality made-to-order Deepline (with a 100mm projection from the building facade) or Slimline (50mm projection from the building facade). Aluminium Window Surrounds kits are available in 27 standard colours and 3 'face' depths (i.e. from the door frame outwards).

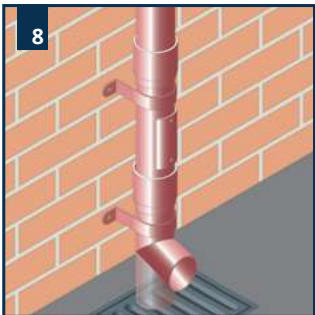

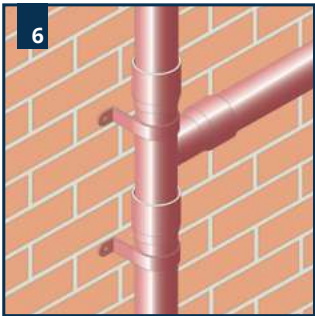

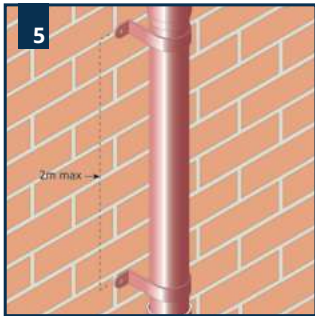

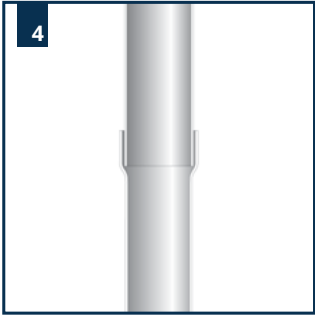

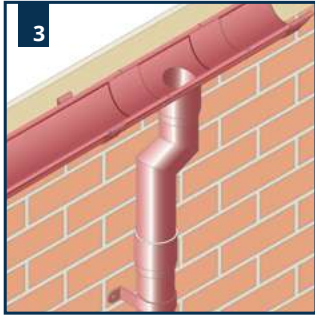

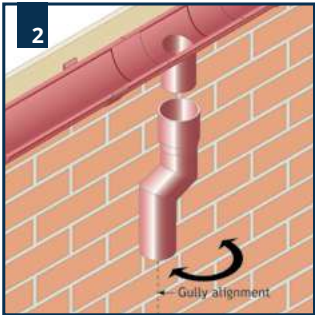

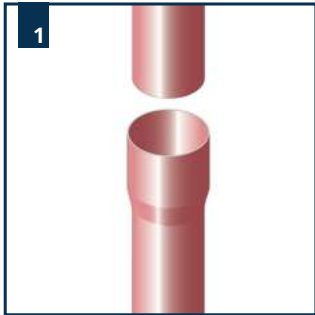

We will call you after you have placed your order to confirm which colour you require so be sure to include your phone number when you place your order.

If you don't find what you are looking for listed here, just give us a call on 0800 644 44 26 or email sales@rainclear.co.uk

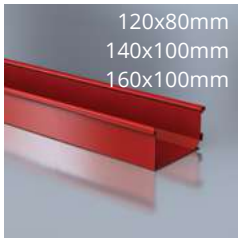

The Surrounds will take 15 days from when we receive your approval of drawings (better safe than sorry!) to paint and deliver to your site or mainland UK address.

With the longevity you can expect from an Aluminium product AND 27 standard RAL colours to choose from, these Window Surrounds kits will provide a perfect finish to your building.

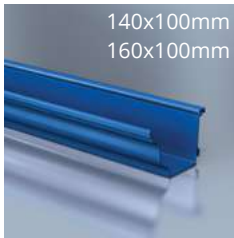

You can download full installation guide PDFs from our website at: rainclear.info/snp-inst

FLUSHJOINT

GUARDIAN

Flushjoint round & square aluminium downpipes are robust and long lasting. Concealed spigots give a smooth, clean appearance to these downpipes to complement any modern building design. Extruded Aluminium is lighter than cast iron but stronger than steel and will last for 25-40 years depending on the environment and location.

Guardian round & square aluminium downpipes are robust and long lasting. Designed for mounting flush with the building with concealed brackets & concealed joints for a high level of security. Extruded Aluminium is lighter than cast iron but stronger than steel and will last for 25-40 years depending on the environment and location.

Special colours are also possible but longer lead times and surcharges apply – **Call now on 0800 644 44 26 for a quotation.**

ALUMINIUM SOFFIT

DELIVERY IN 7-10 DAYS

27 STANDARD RAL COLOURS

We will contact you by return (Mon-Fri 8am-5pm) to confirm the following:

- The standard RAL colour you require – choose from 27 Standard RAL colours.
(Other BS or RAL colours available to 'special order' but may mean an additional surcharge and a longer lead time)

You can download the installation guide
from our website at:
rainclear.info/cop_inst

SKYLINE ALUMINIUM | COPING

The Skyline aluminium coping system has a hidden strap fixing method (the fixing strap comes with an integral EPDM rubber seal) which avoids penetration of the capping, resulting in a weatherproof covering, whilst allowing ventilation over the top of the wall.

- Equally suited to retrofit and new build

- Fabricated fittings are mitred, welded beautifully for a smooth finish on the front face
- Typically fixing can be carried out from the roof so no external access is required.

See the manufacturer's standard RAL colours listed below.

Contact us on 0800 644 44 26 to request a free colour swatch.

Colour Options

RAL 1013M Pearl White		RAL 7024M Graphite Grey

ALUMINIUM COPING

SKYLINE
ARCHITECTURAL ALUMINIUM

Benefits of Aluminium Coping

- Lightweight, durable and non-corrodible – Low maintenance
- Easy to handle and fix
- Life expectancy of 40 years in rural/suburban areas and up to 25 years in industrial/marine areas
- PLUS Aluminium is 100% recyclable at end of life.

Benefits of Skyline Aluminium Coping

- UK manufactured from high quality BBA approved polyester coated aluminium. All processes controlled under ISO9001 & ISO14001 Quality and Environmental Management Systems
- Hidden strap fixing method offers weather-proof covering that allows ventilation over the top of the wall. No fixings pass through the coping, there's no penetration of the capping, and clean lines are maintained on the surface.

ALUMINIUM SLOPING COPING

SKYLINE

ARCHITECTURAL ALUMINIUM

- Coping designed to produce a slope in towards the flat roof, where roof outlets can carry away rainwater, preventing it from potentially damaging the building's facade and leaving unsightly streaks.

Benefits of Aluminium Coping

- Made from lightweight, durable aluminium and coated in BBA approved powder coating colour. Aluminium is made from recycled material and when the coping reaches the end of its life the aluminium is also easily recycled again.
- Highly corrosion resistant. Expected lifespan of around 30 years with minimal maintenance
- Available in 27 RAL colours in 10-15 working days (production drawings need to be signed off by the customer prior to manufacture).

Benefits of Skyline Aluminium Coping

- UK manufactured from high quality BBA approved polyester coated aluminium. All processes controlled under ISO9001 & ISO14001 Quality and Environmental Management Systems
- Fully weatherproof covering to upstand parapets with a fixing method that does not penetrate the coping but does allow ventilation over the top of the wall. Manufactured in the UK
- Simple installation : Clip-on to fixing straps with EPDM rubber seals that have been screwed through marine board into the top of the parapet wall.

Canopies are built on a powder-coated metal framework, then clad in copper or zinc. All of our canopy frames and brackets will need to be drilled by the installer prior to installation to locate the correct fixing points in the substrate. It is important that the installer should ensure that the appropriate fixings are used to suit the substrate. The installer should ensure that the substrate is sound and capable of supporting the appropriate fixings.

- All standard door canopies are constructed with a continental style drip flashing. This will require sealing to the abutment with a proprietary sealer by the installer. Chasing is not required with this product.
- Copper and natural zinc canopies will have a bright finish when leaving our factory. Once the door canopy is installed, the appearance will change with weathering. Copper colouring will react with water and air and the copper will gradually form a beautiful brown patina which creates an additional protection against corrosion. Once installed, both zinc and copper will form a natural patina that requires no maintenance.
- You can clean your canopy if required with cellulose thinners and a soft cloth. **Never use white or methyalted spirit or any other product.**

Shadowline:

Aluminium RAL7016 Anthracite Grey powder coated frame, black forest white fir-wood, and 8mm safety Glass Shadowline Canopy with Integral Drainage Spout to left or right-hand side - select your preferred configuration before adding to your basket.

- Thickness of roof/side section 12.5 cm
- Weight approx. 45 kg
- Roof area 1.23 m²

Timberline:

Aluminium RAL7016 Anthracite Grey powder coated frame, black forest white fir-wood with Integral Drainage Spout to left or right-hand side - select your preferred configuration before adding to your basket.

Both Shadowline and Timberline:

The wooden sections, which are delivered unassembled, are Black forest white fir, which has an appealing wood tone in its initial natural state but will fade naturally to a silver tone over time. Untreated, the wood is highly weather-resistant and durable.

But you may wish to customise the wooden elements by oiling, varnishing, or painting them with your favourite colour. We recommend any treatment like these should be applied to the components before assembling them.

Benefits of the SimpleFIT system

- Cast iron system
- Fully painted ready to install
- Traditional 1.8m (6ft) lengths
- 110mm push-fit joints
- Full range of fittings including access pipe and boss connections

Our SimpleFIT soil range, finished in black gloss as standard, is in stock for next day delivery. It can be overpainted or alternatively can be supplied factory pre-painted in your choice of colour, although this will incur a longer delivery time and a surcharge based on the size of the total order.

SimpleFIT soil is an industry leading push fit soil system designed for a lifetime performance. The contemporary cast iron system provides the aesthetic appearance of traditional cast iron soil systems and is suitable for listed properties and conservation projects.

Also available supplied pre-painted to match any RAL or BS colour reference. Colour Match service taken from an existing sample.

Features

- The push-fit installation means substantial savings in labour for each joint. No specialist training is required.
- 50 & 100mm diameter socketless pipes are available in 1.5m, 1.8m & 3m lengths and supplied pre-painted in a black gloss finish.
- The push fit sockets faithfully replicate the appearance of a traditional LCC soil pipe system but incorporate EPDM rubber sealing rings providing a quick and efficient installation. Our specially design gasket relaxing tool and gasket lubricant are the only tools required for jointing.
- Correctly installed and maintained Traditional Express Soil systems will last over 100 years – Fit and forget installation.
- Long life expectancy – cost effective choice. 100% recyclable at the end of its life. Quiet in operation – Low noise levels due to the sound deadening properties of cast iron.

Applicable standards and codes of practice

- BS 416 part 2 – Soil, waste and ventilating pipes and fittings.
- BS EN 681 – 1 Synthetic rubber gaskets.
- BS EN 12056 – Codes of practice for gravity drainage systems, internal buildings.
- Pipes and fittings are supplied ready to install with a two-pack gloss paint exterior finish as standard, suitable for internal and external installations.

Designed with the installer in mind SimpleFIT makes complete sense for those tricky conservation projects. The innovative push-fit jointing method significantly reduces installation time, the NEW SimpleFIT range now comes fully painted for immediate installation.

NOTE: COLD WEATHER

- In cold weather you may need to plunge the collar with gasket into hot water to fit.

You can download full installation guide PDFs from our website at: rainclear.info/smft-inst

LCC: THE TRADITIONAL SOIL SYSTEM

NEXT DAY DELIVERY!

ON ALL STOCKED PRODUCTS

Order by noon for next working day delivery

TRADITIONAL LCC

Benefits of the Traditional LCC system

- Cast iron system
- Manufactured to original imperial dimensions to BS416
- Traditional 1.8m (6ft) lengths
- Authentic caulked jointing system
- Full range of fittings for ease of installation

Our Traditional LCC Soil System is always supplied in black bitumen finish as per the British Standard BS416 for Soil Products.

Availability

Most of our Traditional LCC Soil System products are in stock for next day delivery, however selected items are manufactured on request. The time scale for these orders are often dependent on the size of the total order, so get in touch to discuss your requirements in plenty of time.

The range provides a comprehensive offering of traditional socket & spigot pipes and fittings for soil and waste installations on the external facade. Once installed it is recommended to over-coat the system to touch-up any scuffs incurred in transit and installation.

The cast iron system offers the ideal solution for conservation and heritage projects where a pipe system is required to blend sympathetically with the heritage building.

Features

- Pipes available from 50mm to 150mm diameters in standard lengths 0.6m, 0.9m, 1.2m and 1.8m.
- All products are based on imperial dimensions so ensuring compatibility with existing installations when replacing or extending pipework.
- Cold caulked joints can be made with 6mm caulking cord and black joint sealant both available from stock. (This method removes the requirement for using naked flames to melt lead on site).
- Traditional LCC Soil pipes are highly resistant to distortion caused by accident or vandalism.
- Correctly installed and maintained Traditional LCC Soil systems can last in excess of 100 years and this long-life expectancy actually makes cast iron a cost-effective choice.
- Minimal maintenance requirements - occasional painting approximately every 10 years (inland areas).
- 100% recyclable at the end of its life.
- Low noise levels due to the sound deadening properties of cast iron.
- Ears can be added to any LCC soil fitting on request.

NOTE: We do not recommend over-painting the black bitumen standard finish. If you want your soil system in a colour other than black, to match in with our Cast Iron rainwater systems for example, we recommend our SimpleFIT Soil System.

You can download full installation guide pdfs from our website at: rainclear.info/lcc-inst

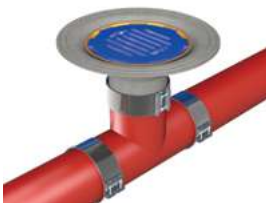

The Harmer SML system, with its comprehensive range of fittings and accessories, offers an innovative, whole-building solution for soil, waste and rainwater drainage installations. The system is fully compatible with other market-leading Harmer and Wade drainage products, including roof, floor, shower and channel drains

The Harmer SML socketless lightweight cast iron soil and waste system is BBA certified and meets the Standard of BS EN 877. The SML system combines modern, state-of-the-art drainage technology with the unique characteristics and benefits of cast iron as a preferred material for drainage installations.

This range provides adjustment from 37.5mm to 550mm; self leveling heads; a variety of dividers for preset drainage gaps as well as heads without dividers for screw fixing decking battens. An extended key allows for fine adjustment after slabs have been laid.

These adjustable height pedestals are designed for use in terraces, walkways, balconies and ballasted flat roofs.

- Adjustable height
- Self-leveling head
- Self locating
- Compatible & robust

 FREE DELIVERY on orders over £500 Net within 3 – 5 working days

We are now supplying a range of Modulock Non-Combustible Pedestal Supports from Harmer - European Classification (Euroclass) A1 Fire Rated decking and paving pedestals.

Manufactured from steel, provides a super strong support for either decking or flooring joists (/D), or a super strong support for paving slabs (/P).

Large height-adjustable range available for every application.

- Perfect for terraces, podiums, roof decks, balconies
- Will not crack, split or warp
- Highly durable zinc nickel finish provides excellent corrosion resistance.

Material: Mild Steel

Finish: Aztec / Zinc / Nickel
corrosion resistant finish

Size: 28mm to 458mm

Compression: 1000kg

WD Series roof outlet in an inverted roof

Wade is established as a leading manufacturer of quality drainage products. Much of this success can be attributable to an on-going commitment to put technology to practical use, to generate fresh ideas, and to guarantee quality assured production. Rainclear Drainage have added a comprehensive range of wade cast iron outlet products to the website to provide choice and enable specifier and users to select roof outlets that will meet their requirements.

Wade roof outlets can be connected to all pipework in general use; certain bodies are for direct connection to pipework, others require the use of threaded pipework adaptors or proprietary couplings.

Strength, corrosion resistance and appearance are important considerations when selecting roof outlets. The materials and finish of Wade roof outlets are selected to provide lasting performance and to blend

with surroundings. The products require the minimum of maintenance, but periodic inspection should be carried out to ensure that roof outlets are free from gravel, leaves and other debris which could impair the performance of the system.

Cast iron – BS EN 1561, used for these outlets and their threaded pipework adaptors, is a widely used metal in the drainage industry. Its resistance to corrosion permits extended use under extreme conditions. Castings are coated with a high-grade lacquer paint, applied by full immersion dip, to provide internal and external surface coverage. Paint will gradually wear off. Cast iron parts should be repainted every five years. Some oxidation (surface rusting) is a natural process which does not weaken the core material.

*NB: Quartz Zinc and Natural Zinc stopends are not 'push-fit' and require 'seaming' or glueing. You'll find the glue online and in this brochure on page 134 and the video instructions for these different methods on our You Tube channel (rainclear.info/youtube)

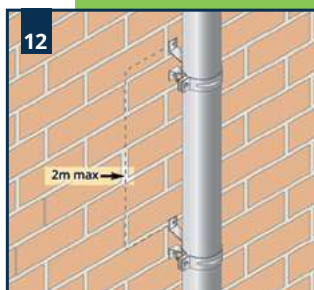

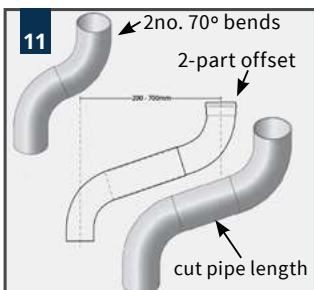

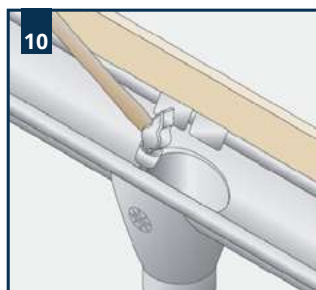

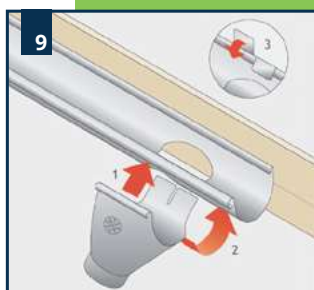

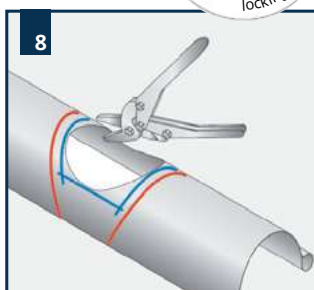

N.B. NEVER CUT WITH A SPINNING BLADE
- zinc fumes released when galv steel is heated are toxic

N.B.
Alternatively
choose the
prefabricated
outlet pg.142

Download installation guide,
cutting guide & How to videos
from our website at:
rainclear.info/inf-inst

N.B. Wear gloves when installing Plain Galv
The Plain Galv will dull over time. Touching it without gloves breaks through the oily surface and starts the weathering process earlier in those areas. In a few months the 'weathering' will catch up all over.

* Some wood cannot be used with our uncoated galvanised steel and zinc rainwater goods because they contain a high volume of acid.
We do not recommend using the galvanised steel screws with: Douglas Fir, Oak, Chestnut, Larch, Red Cedar, Cedar.
Stainless steel screws are the more suitable alternative.

RAINWATER SYSTEMS

Benefits of Galvanised Steel

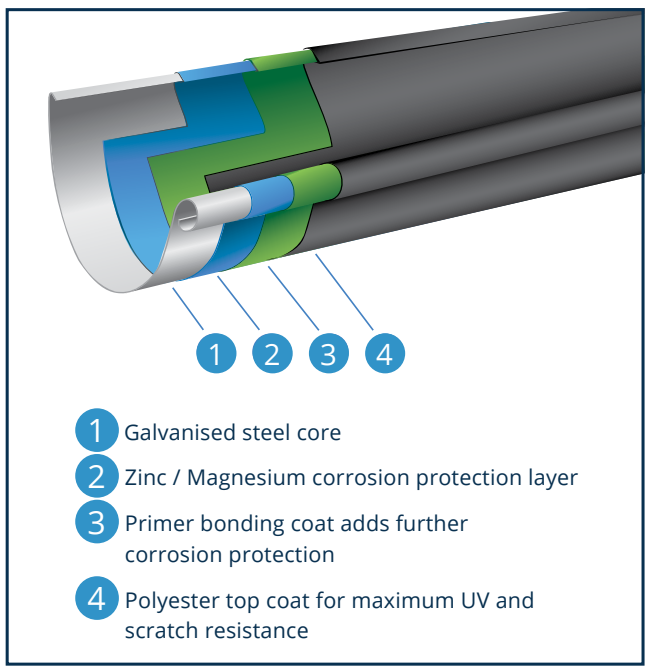

- Lightweight, stylish and long lasting
- Stable material with only 1.2mm/m 100k thermal Expansion
- Easy install with push-fit stop-ends and gutter unions with EPDM rubber seals so no welding, soldering or messy sealant required
- Low Maintenance system with no need to repaint
- Environmentally friendly and fully recyclable
- Wrap around gutter outlets for complete flexibility or prefabricated for ease

INFINITY RAINWATER SYSTEMS

The galvanised steel rainwater system is available in a half round gutter profile which incorporates an integral rolled front edge that gives it both its inherent strength and innovative joining method. It also provides a decorative edge to the gutter while the Deep-flow profile offers additional capacity compared to other systems

The round downpipe system comprises round pipes with swaged joints that simply push together to give a stylish, contemporary finish. Available in 80mm or 100mm diameter to suit the appropriate gutter size.

- 1 Galvanised steel core
- 2 Zinc / Magnesium corrosion protection layer
- 3 Primer bonding coat adds further corrosion protection
- 4 Polyester top coat for maximum UV and scratch resistance

Benefits of the NEW ZM Coating

- Our Infinity Galvanised Steel gutters, hoppers and downpipes has been improved with a new, innovative coating of Zinc, Magnesium and Aluminium to produce an even more robust rainwater system 'Infinity 'ZM' Steel' with an improved warranty of 25 years (and 20yrs in some of the harshest environments).
- The combination of zinc, 3.5% aluminium, and 3% magnesium in the 310g/sqm metallic coating provides a breakthrough in corrosion protection - three times better than traditionally galvanised steel (zinc alone coated metal) based on outdoor tests.

NEW Infinity ZM Coating

Our Infinity Galvanised Steel gutters, hoppers and downpipes has been improved with a new, innovative coating of Zinc, Magnesium and Aluminium to produce an even more robust rainwater system 'Infinity 'ZM' Steel' with an improved warranty of 25 years (and 20yrs in some of the harshest environments).

Longer lasting

The combination of zinc, 3.5% aluminium, and 3% magnesium in the 310g/sqm metallic coating provides a breakthrough in corrosion protection - three times better than traditionally galvanised steel (zinc alone coated metal) based on outdoor tests.

With the same self-healing effect once cut with a hacksaw (no spinning blade please - they heat up the metal and release toxic zinc fumes) which ensures excellent edge protection (an unprecedented level of surface and cut-edge protection, even in the most hostile environments).

Longer lasting metallic finish

This version retains its shiny metallic finish for longer. Galvanised steel dulls over time, gradually becoming more 'matt' and weathered - a consequence of the zinc coating being sacrificed to create a hard patina or crust that protects the steel core. The new formula coating means that, while it works in a similar way to protect the core steel, the process takes longer.

And the regular zinc coated Galv steel components came with an oil coating to protect the process from happening faster and unevenly in the places where ungloved fingers had touched the surface during installation. (Eventually the patina would become even/ the same all over). But this no longer an issue with the new Z(n,Al),M(g) formula coating.

Resistant to more aggressive environments

It is now more suitable for industrial environments, and suitable closer to coastal environments than ever before (as well as closer than our rivals can recommend). The alternative for these locations, and those even closer to the coast, has always been to select a colour coated version - like the Aluminium Grey which has a slight sparkle to its finish, and which will not dull over time either.

And it is also now more corrosion resistant to run-off from bituminous materials and woods with high acidic content like Douglas Fir, Oak, Chestnut, Larch, Red cedar, and Cedar. (Materials such as cedar or birch cladding contain volatile alcohols, and oils that have a solvent action on some protective coatings applied to metal - iron and uncoated steel are much more susceptible to the corrosive influence of these woods). The alternative in these situations has always been to select one of the colour coated versions instead.

So now we can say the manufacturer warranty is for 25 years (following their installation guidance - we will supply as a downloadable PDF with every order of an Infinity ZM steel system - please read it!) but with proper care and sensible maintenance the life expectancy should be up to 50 years.

Why not request a sample, a pricelist and/ or a phone call to discuss your project.
